### **DETAILED ACTION**

This action is responsive to the amendment and Request for Continued Examination (RCE) received on January 18, 2008.

Claims 1-7 have been amended.

Claims 1-7 are currently pending further examination.

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1 and 7 are drawn to an overall communication method among a first, second and third information processing apparatuses and setting the source address of a first communication apparatus to a global address provided by the third information processing apparatus during communication with the second information processing apparatus, classified in 709, subclass 245.
  - II. Claims 2-6 are drawn to a third information processing apparatus for performing rent-out of an address to a first information processing apparatus and for maintaining correspondence information between the first information processing apparatus and a second information processing apparatus and used in identifying the first information processing apparatus's inherent or actual address, classified in class 709 subclass 224.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the

subcombination has utility by itself or in other combinations.

3. In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed. In the instant case, invention I has separate utility such as computer to computer data addressing specifically setting the source address of a first communication apparatus to a global address provided by the third information processing apparatus during communication with the second information processing apparatus. Invention II has a separate utility such as, computer network monitoring and specifically maintaining correspondence information between the first information processing apparatus and second information processing apparatus and used in identifying the first information processing apparatus's inherent or actual address to a second information processing apparatus. (see MPEP § 806.05(c)).

4. Because these inventions are distinct for the reasons given above and have attained recognition in the art as a separate subject of inventive effort as demonstrated by their different classifications and thus requiring a separate field of search (see MPEP § 808.02) for each distinct invention, restriction for examination purposes as indicated is proper.

5. The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

6. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

A SHORTENED STATUTORY PERIOD FOR RESPONSE TO THIS ACTION IS SET TO EXPIRE THIRTY DAYS FROM THE MAILING OF THIS COMMUNICATION. FAILURE TO REPLY WITHIN THE PERIOD FOR RESPONSE WILL CAUSE THE APPLICATION TO BECOME ABANDONED (35 USC § 133). EXTENSION OF TIME MAY BE OBTAINED UNDER PROVISION OF 37 CFR 1.136(A).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shawki S Ismail whose telephone number is 571-272-3985. The examiner can normally be reached on M-F 9:00 - 5:00.
